

Psychotherapy Skills Assessment

by Coria Training Psychotherapy

This assessment is designed to help you understand your clinical communication skills. You'll be presented with 10 client statements and 2 simulated patient-therapist conversations. For each, you will provide the exact, word-for-word response you would say to the client.

Choose the **Pre-Test** to establish a baseline of your skills, or the **Post-Test** to evaluate your growth. The scenarios are research-based, and the evaluation is powered by AI to provide personalized, evidence-based feedback. Each test can only be taken once.
